038TG Spray Nozzle

Model 038TG (Trigger Guard) has been designed to address several high temperature washdown issues and concerns.

Ergonomics. Ergonomically designed trigger guard and handgrip with front mounted spray activation trigger reduces hand fatigue.

Heat. The 038TG nozzle is rated to 200°F (93°C). The application of high tech industrial polymers reduces heat transfer through the hand grip so user comfort and protection are increased.
